Algorithm 1 少样本学习微调过程提示词构造

```
Require: Integer count \in [1, 5], String text
Ensure: Solution String messages
 1: Initialize example_path, exampl_txt, example_result ▷ 初始化列表
 2: read all_result from xlsx
                                              ▷ 读取所有教师评分结果
 3: for path in example_path do
                                            ▷ 遍历文件, 获取样本数据
      open path as file
 4:
      read txt from file
 5:
      exampl\_txt append txt
                                              ▶ 文本存入 exampl_txt
 6:
      \mathbf{for}\ item\ \mathrm{in}\ all\_result\ \mathbf{do}
 7:
         if item is the result of file then ▷ 检测结果是否与文件相匹配
 8:
             exampl_result append item
                                           ▶ 结果存入 example_result
 9:
         end if
10:
      end for
11:
12: end for
13: Initialize prompt
                                                    ▷ 构建原始提示词
14: messages = [{'role': 'system', 'content': prompt}] ▷ 初始化模型输入
15: for i = 0 to count do
                                 ▷ 依据 count 数量添加少样本学习样例
      content \leftarrow example\_txt[i] \&example\_result[i]
16:
      message append content
17:
18: end for
19: message append ({'role': 'user', 'content': f' 请给以下报告打分:{text}'})
20: return message
```
